

Numicon

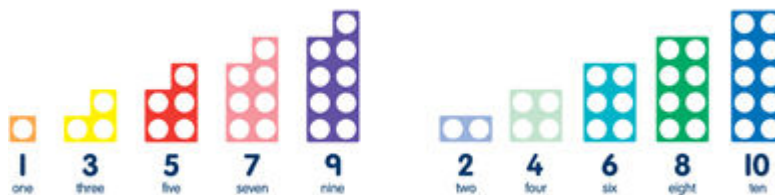

Numicon is a multi-sensory resource used to teach children mathematics. The Numicon shapes help children fully understand the concept of number, giving them the best chance to be successful in maths at primary level and beyond.

The Numicon shapes are designed to offer children several kinds of visual patterns suggesting connections between numbers.

It is crucial for the children to be able to order numbers and that they are able to make the connection between 'one more' and 'next' in order to understand our system of whole numbers.

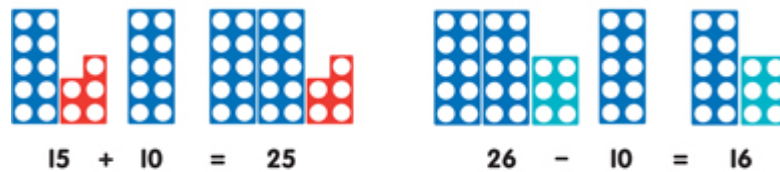

Through familiarising themselves with the Numicon shapes, children can soon determine whether a number is odd or even.

Children soon become confident with the number system and progress to working with hundreds, tens and units.

Addition & Subtraction:

The Numicon activities that are taught in our classrooms are enjoyed by the pupils and as a teacher it is very rewarding to see the children understanding and enjoying mathematics.
